

2014-2016, 2018 Honda CBR650F Fender Eliminator Kit

Parts List

- x1 License plate holder
- x1 License plate LED light
- x1 License plate light harness adapter
- x6 M6x14mm bolts
- x2 M6x20mm bolts
- x8 M6 nylon lock nuts
- x4 M6 washers
- x4 M6 large OD washers
- x2 Factory signal adapters
- x2 Aftermarket signal adapters

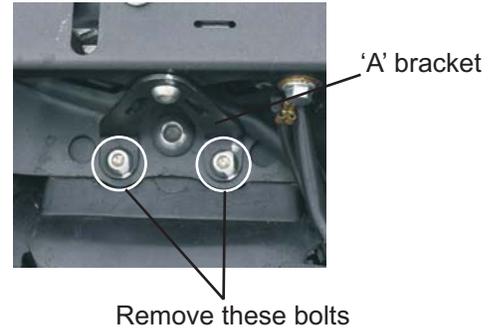

1. Remove seat
2. Unplug turn signals and license plate light (orange/blue wires and white 2-wire connector) and undo cable tie
3. Remove 3 bolts from the top holding the fender and carefully pull out along with the wires. Remove the 2 bolts holding the 'A' bracket - See illustration on right. These bolts will no longer be used
4. Attach license plate light to plate holder. Attach license plate light adapter harness White>White and Black>Black, then run the wire up through the right square hole

OPTIONAL

Mount factory turn signals: Separate the factory fender in half (8 screws), unmount the signals and re-mount them to our signal brackets. Mount the license plate in front of the plate holder, and the signal adapters behind the plate holder using the M6x14 bolts, larger OD washers and lock nuts. Run the left and right signal wires through the left and right square holes respectively

Mount aftermarket turn signals: Mount the turn signals to the aftermarket brackets and mount behind the plate holder on the upper holes. Aftermarket signals may require additional wiring.

5. Run the wire(s) back up through the under tail and mount the plate holder assembly to the bike using the (2) M6x14 bolts on the rear facing holes and (2) M6x20 bolts to the front facing holes, M6 washers and lock nuts. Note: The front facing holes are threaded and the nut and washer will additionally secure the 'A' bracket from Step 3 above.

6. Plug the left/right turn signals and license plate light back into the bike and test all functions

7. Reinstall seat
