

Honda CBR1000RR 2008-2011 Fender Eliminator Kit

Parts List

- x1 Under tray
- x1 Inner support bracket
- x1 Plate holder
- x1 License plate LED light
- x1 License plate LED adapter harness
- x8 6x16mm allen bolts
- x8 Washers
- x4 Silver spacers

1. Remove seats (2 side bolts under small plastic panels tabbed at front)
2. Remove seat strap and 4 bolts on top of rear seat panel
3. Remove seat panel (slide back while lifting – note: it's tabbed in at front connecting panel). Remove the lock plate (4 bolts)
4. Remove rear fender (4 bolts – 2 on each side) and remove turn signal/license plate harness (fender splits in half to access harness) – You will no longer need these bolts
5. Remove 2 phillips screws front the front inner tool tray
6. Remove tail light (retain collar, rubber mount, washer and bolt for remounting later)
7. Assemble the fender eliminator kit first – feed the license plate LED wires through the plate holder up the back then into the center hole. Note: secure the license plate LED light after step 8
8. Using 4 6x16mm allen bolts, bolt the plate holder to the inner support bracket through the under tray.
Bolt>Washer>Plate holder>Under tray>Inner support bracket
9. Connect the license plate harness adapter
10. Mount tail light using existing hardware
11. Mount the fender eliminator assembly to the chassis using 4 6x16mm bolts and washers – Note – the 4 silver spacers must be fitted between the under tray and the chassis.
Bolt>Washer>Under tray>Spacer>Chassis.
The two rear bolts must feed through the inner support bracket arms. Secure the 2 phillips screws at the front tray
12. Connect the license plate light and tail light. Note: rear turn signals cannot be mounted with this kit. We recommend an integrated turn signal tail light.
13. Install seat panel and seats in reverse order.
14. Check lighting
