

# 2015-2018 Yamaha R1 In-Vent LED Rear Turn Signals

Part No: RT-Y15R1

1. Locate and remove the 2 screws on the bottom side of the undertail

2. Remove passenger seat, remove rider seat (2 bolts under rear cushion). Remove center plastic cover (4 plastic screws)

3. Slide in the left and right in-vent turn signals and mount using the same bolts from step 1. Apply a drop of Loctite or thread sealer on these bolts.

4. Remove the 1 plastic screw and lift up on this panel to run the wire underneath.

5. Unplug the left and right turn signals (black and white large connector close to tail light). Attach our adapter harness to the LED in-vent turn signals and plug them back to the bike (Yellow wire>White plug, Blue wire>Black plug). Reinstall the center plastic cover and route the wires shown below at the opening gap.

6. Reinstall the rider and passenger seats. Check all lighting before going on a road test.

Note: Factory or factory equivalent front turn signals must be present and plugged in order for the flash rate to remain normal.
