

Windscreen Care Maintenance

To maintain your windscreen spray plenty of water along with mild soap on the screen to wash off as much debris, dust, dirt, sand, bugs, etc as possible while using a clean cotton or microfiber cloth to wipe. Do not use paper towels and most importantly do not wipe when the windscreen is dry. Maintain a wet wiping surface until the windscreen is free of contaminants. Like any polycarbonate windscreen, small particles on the windscreen when rubbed will scratch the material creating swirly marks. Even with proper care light marks can still be seen but is minimal. To decrease the likelihood of future particles from sticking, apply a layer of polishing compound that contains wax on the windscreen.
